

## **claims**

what is claimed is:

1. A luck clamp apparatus comprising:  
a clamp seat having a space between a first clip and a second clip, and the  
one side of the first and second clips connecting to; and  
a stander pivoting a cavity of the second clip and placing at a opening of the  
space, and having a holder generating a effect of pressure to the first clip  
when the stander is spin down by a weight.
- 2 . The luck clamp apparatus as claim 1, wherein the stander further  
comprises a connecting apparatus in the cavity of the second clip to be  
moved up and down by an object holded.
- 3 . The luck clamp apparatus as claim 1, wherein the stander further has a  
plane that is opposite to the holder for sticking with the cavity of the second  
clip.
- 4 . The luck clamp apparatus as claim 3, wherein the holder of the stander  
and the opposite of the plane form an inclined plane of a leading plane.
- 5 . The luck clamp apparatus as claim 1, wherein the holding plane of the  
first clip and the holder have flat planes.
- 6 . The luck clamp apparatus as claim 1, wherein the holding plane of the  
first plane and the holder have wave planes.
